

Library Shelf

This is no ordinary library...

Curio has an incredibly powerful library shelf. It's divided into tabs so we're going to give you a tour.

Let's start by clicking the Library toolbar button. Once the library shelf appears you'll notice tabs along the top showcasing the available libraries.

The **Project** asset library shows all assets within your current project. You can search for a particular asset based on file name or use the popups at the top to filter out the displayed assets. Drag items out into your idea space, or right-click on items for more information.

The **Local** file library uses the power of Spotlight to quickly find files on your hard disk using a number of criteria including text, tags, modification date, and kind of file. You can also set up custom scope folders such as your Dropbox folder. If you install the free [Curiota](#) companion app then it integrates with Curio via the Local library, as well.

The **Stencils** figure library [STANDARD] [PRO] shows all available figure stencils so you can easily and quickly drag-and-drop stencils into your idea space. An invaluable resource for power stencil users.

The **Sleuth** library [STANDARD] [PRO] is your view into the internet for one click searching of popular reference and image sites.

The **Evernote** library [STANDARD] [PRO] allows easy access to your Evernote cloud so you can quickly search for snippets you've collected outside of Curio and drag and drop those items into your idea spaces.
