

YouTube and Vimeo

Add external, web-based videos

The easiest way to insert a video from YouTube or Vimeo is to simply drag the video URL from your browser directly to an idea space, or copy/paste it into the idea space. Curio will create a resizable, video figure configured for playback.

Alternatively, you can use the Insert button on the toolbar and choose either a YouTube Video or Vimeo Video. Then paste in the URL to the video. This should be the URL to the video, not the embed code.

Sleuth and Sleuth Shelf

If you have Curio Standard or Professional you can use Curio's integrated Sleuth and Sleuth shelf to easily search YouTube or Vimeo for videos and simply drag-and-drop results to your idea space.
